

Synthetic Furniture Fixture

A Golden Extraction Test Document

This synthetic document combines a bordered page frame, running header and footer furniture, a two-page printed table of contents, four levels of body headings, a vector diagram, a vector bar chart, a ruled table, and a nested bullet list, all built purely for automated testing -- it contains no real customer content.

1 Introduction

This section describes the purpose of the furniture fixture and the structural extraction cases it is designed to exercise across the pages that follow.

1.1 Purpose and Scope

The scope of this specification covers every furniture element a real document might carry, including running headers, footers, and a bordered page frame that must never be mistaken for genuine page content such as

a ruled table or a printed figure, which is exactly why this paragraph is deliberately split across a page boundary without terminating punctuation.

1.2 Document Overview

This document is organized into numbered sections that mirror the printed table of contents on the preceding two pages, so every heading below can be matched against its TOC entry by number and title.

2 System Requirements

The synthetic body pages that follow combine headings, paragraphs, figures, and lists to give the extraction pipeline a realistic mixture of structural elements to classify.

2.1 Functional Requirements

Functional requirements in this fixture are limited to reproducing the structural shapes a real specification exhibits, not to describing any actual product behavior.

2.1.1 Data Processing Pipeline

The data processing section below demonstrates a two-level bullet list, used elsewhere in real specifications to enumerate the sub-steps of a larger procedure.

- Ingestion
 - Normalize incoming documents before parsing.
 - Validate structural markers such as headings and page numbers.
- Transformation
 - Apply extraction rules for each recognized element type.

2.1.2 Edge Case Handling

Edge cases recorded here are fixture-generation edge cases only: a heading printed at the smallest of the four bold sizes used across this document.

2.2 Non-Functional Requirements

Non-functional requirements in this fixture take the form of a vector-drawn flow diagram placed beside several lines of body text, so the diagram is never the only content on its page -- the case the old whole-page rule misses.

Figure 1: Process Diagram

3 Process Diagrams

This section pairs a vector-drawn bar chart with a short caption, again surrounded by body paragraph text rather than standing alone on an otherwise blank page.

Figure 2: Revenue by Quarter

3.1 Workflow Overview

The ruled table below summarizes a short set of values and is positioned so that it does not cover the entire page, distinguishing it from the page-frame border drawn around every page.

Stage	Input	Output
Triage	Raw document	Tier assignment
Extract	Tier assignment	Element shards

Field	Value
Status	Draft
Owner	Fixture
